

Thank you for purchasing our direct mount rings. Here is some information you may find helpful.

The screws that bolt the ring to the action require a Torex T-15 wrench.

If supplied with two short screws and two long screws the short screws need to go in the front (barrel) end of the action.

These rings are cut as a set with both rings facing the same direction. _| _|

If you ordered the rings with Minute of Angle cut into them, they will be marked with F or R and an arrow.

Place the F on the front of the action with arrow pointing to the Barrel, Place the R on the rear with the arrow pointing to the tang.

If you have any problems let us know.
